The boyz from CU want us to write a little script that logs into
www.thefacebook.com, loops through
http://www.thefacebook.com/profile.php?id=xxxxx
replacing xxxxx with numbers to grab people's email addresses.
We give them back a list.

1) how much effort?
2) Are we prison guards in iraq, waiting for our own controversy? (I found nothing in the facebook's TOS about mining email addresses)
